The principles and practices for forest harvesting in Indonesia (2000) have been developed to provide a uniform set of minimum standards for logging practices in the production and limited production forests in Indonesia. guidelines for Indonesia provides the mechanism for HOW the standards will be applied in the field or "how to do the work". Tractor skidding—mostly by crawlers and skidders—is the most common system (ca. 90%) used in the Indonesian Selective Cutting and Planting (TPTI) System. Considering the fact that familiarity with more environmentally friendly logging system (such as cable and aerial logging) is still lacking in Indonesia, often due to cost, etc., RIL guidelines focus on ground-based harvesting which can be implemented in the lowland and hill forests in Indonesia. Target groups of this guidelines are production

He's logged everything from giant redwoods to desert mesquite and fulfilled his youthful ambition to fell timber in every major forest of North America. Drawing on this experience, he has invented several chainsaw mills, and perfected the easy, efficient method of chainsaw lumbermaking that he describes in

this book. If you've ever had trouble finding the lumber you need, or wanted to build something with your own trees, "Chainsaw Lumbermaking" is the book you've been waiting for. Will Malloff has built a variety of mills and is the designer of what many consider the most effective chainsaw lumbermaking system available. Malloff has spent nearly half a century researching and developing tools and wood technology that minimize ecological impact. In an endeavor to build his own blacksmith shop on a Canadian Pacific island, he invented a state-of-the-art ripping chain, which made chainsaw lumbermaking more

Starting from nothing, he set about the task. It was not easy;

Success was hard-won and ultimately depended on an overlooked truth... The Tree Faller's Manual is an essential handbook for forest operators and others who need to fell trees manually

using a hand-held chainsaw. This manual builds on the information provided by the Chainsaw Operator's Manual. Tree felling is a high risk activity. Many fatalities and serious injuries have occurred as a result of being struck by falling trees, dislodged tree limbs or other dangers in the area. Most of these accidents are caused by using unsafe felling techniques and not following safe work procedures. This manual will guide the faller to safer work techniques. The manual is based on the national competency standards for the

forest and forest products industry where tree-felling is covered using three categories: basic, intermediate and advanced. Basic tree felling applies to trees that are relatively small, with a single stem and no defects. Intermediate tree felling covers trees with single or multiple stems, limited defects, and lean and weight distribution that can be adapted to felling direction. Advanced tree felling applies to larger and more complex trees and includes trees deemed to be more hazardous. Workplace safety, risk
