Collaboration has become a popular

approach to environmental policy, planning, and management. At the urging of citizens, nongovernmental organizations, and industry, government officials at all levels have experimented with collaboration. Yet questions remain

about the roles that governments play in collaboration--whether they are constructive and support collaboration, or introduce barriers. This thoughtful book analyzes a series of cases to understand how collaborative processes work and

Get Free Environmental Management And Co Ordination Plan

whether government can be an equal partner even as government agencies often formally control decision making and are held accountable for the outcomes. Looking at examples where government has led, encouraged, or followed in

collaboration, the authors assess how governmental actors and institutions affected the way issues were defined, the resources available for collaboration, and the organizational processes and structures that were established. Cases include

collaborative efforts to manage watersheds, rivers, estuaries, farmland, endangered species habitats, and forests. The authors develop a new theoretical framework and demonstrate that government left a heavy imprint in each of the

efforts. The work concludes by discussing the choices and challenges faced by governmental institutions and actors as they try to realize the potential of collaborative environmental management.
