

Eureka

Explores the science and creative process behind Poe’s cosmological treatise. In 1848, almost a year and a half before Edgar Allan Poe died at the age of forty, his book Eureka was published. In it, he weaved together his scientific speculations about the universe with his own literary theory, theology, and philosophy of science. Although Poe himself considered it to be his magnum opus, Eureka has mostly been overlooked or underappreciated, sometimes even to the point of being thought an elaborate hoax. Remarkably, however, in Eureka Poe anticipated at least nine major theories and developments in twentieth-century science, including the Big Bang theory, multiverse theory, and the solution to Olbers’ paradox. In this book—the first devoted specifically to Poe’s science side—David N. Stamos, a philosopher of science, combines scientific background with analysis of Poe’s life and work to highlight the creative and scientific achievements of this text. He examines Poe’s literary theory, theology, and intellectual development, and then compares Poe’s understanding of science with that of scientists and philosophers from his own time to the present. Next, Stamos pieces together and clarifies Poe’s theory of scientific imagination, which he then attempts to update and defend by providing numerous case studies of eureka moments in modern science and by seeking insights from comparative biography and psychology, cognitive science, neuroscience, and evolution. “Edgar Allan Poe, Eureka, and Scientific Imagination is the most comprehensive treatment of Eureka that has yet been published. It is staggeringly thorough in its analysis of Poe’s book, but it also shows how Poe’s theories of cosmogony and cosmology ramify into his fiction and poetry, especially the tales of ratiocination. Stamos takes Eureka seriously, and he does so with the empirical undergirding of vast amounts of scientific scholarship and literary criticism.” — James M. Hutchisson, author of Poe

"Eureka!" is a complete 11-14 science course. The scheme meets all the requirements of the National Curriculum and provides a scheme of work that matches the content of QCA's non-statutory scheme of work. ICT, numeracy and literacy are integrated into the course.

The ancient Greeks gave us our alphabet and much of our scientific, medical and cultural language; they invented democracy, atomic theory, and the rules of logic and geometry; laid the foundations of philosophy, history, tragedy and comedy; and debated everything from the good life and the role of women, to making sense of foreigners and the best form of government, all in the most sophisticated terms. But who were they? In Eureka!, Peter Jones tells their epic story, which begins with the Trojan War and ends with the rise of the Roman Empire, by breaking down each major period into a series of informative nuggets. Along the way he introduces the major figures of the age, including Homer, Socrates, Plato, Aristotle, Alexander the Great, Euclid and Archimedes; explores the Greek myths and the role of the gods;provides fascinating insights into everyday life in ancient times; and shows us the very foundations of Western culture. Eureka! is both entertaining and illuminating, and will delight anyone who ever wanted to know more about our ancient ancestors.

The year 2014 marks the centennial of the completion of the Northwestern Pacific Railroad (NWP), celebrated by driving a "golden spike" at Cain Rock in October 1914. This achievement was the culmination of a massive, six-year engineering effort to connect rail lines ending at Willits with the early lumber company railroads of the Humboldt Bay region. When it was completed, the NWP linked Eureka with San Francisco by rail, a milestone in the history of Humboldt and Northern Mendocino Counties. This book examines the impact of the NWP on Northwestern California. Although no longer operational, the railroad today symbolizes the ongoing struggle to connect this isolated region with the wider world.

Eureka Street is a story of Belfast in the six months just before and after the latest ceasefires. It is the story of Chuckie Lurgan, fat, Protestant and poor, who suddenly becomes wealthy by various legal but immoral means; and of Jake Jackson, Catholic reformed tough guy, who has been abandoned by his English girlfriend and is looking for love. Meanwhile the strange letters 'OTG' start appearing on walls and paving stones throughout the city.

'Powered by a satisfactorily pacy plot and oiled by Quinn's effortless prose, this is a book that slips down as easily as a gin-and-it' Guardian Summer, 1967. As London shimmers in a heat haze and swoons to the sound of Sergeant Pepper, a mystery film - Eureka - is being shot by German wunderkind Reiner Werther Kloss. The screenwriter, Nat Fane, would do anything for a hit but can't see straight for all the acid he's dropping. Fledgling actress Billie Cantrip is hoping for her big break but can't find a way out of her troubled relationship with an older man. And journalist Freya Wyley wants to know why so much of what Kloss touches turns to ash in his wake.

Tucked away behind the "redwood curtain" on the northwestern coast of California lies the historic city of Eureka. The location of the city directly alongside Humboldt Bay combined with the abundance of redwood attracted miners, loggers, and fishermen, and the city grew and prospered quickly. Using a comparison of historic images gathered from several historical archives matched with current photographs taken by the author, this book shows Eureka's transformation from a wild logging and fishing town into the modern city it has become today.

On 9 December 1854, a bloody battle between gold miners, soldiers and police raged at the Eureka Lead in Ballarat. This conflict, which had been brewing for years, had momentous effects overturning the accepted social order, bringing democracy to Victoria and establishing some fundamental Australian social ethics. Eureka introduces you to the people and events that shaped this key moment in Australia's history and explains just what a difference it made. It tells of corruption, racially-oriented violence, government disdain towards the diggers, murderous pub brawls, and a disinterested governor who had to be bribed to do the job. The many consequences of the gold rush included making Melbourne the world's most expensive city and began what became the Australian Labor Movement.

Eureka Math is a comprehensive, content-rich PreK–12 curriculum that follows the focus and coherence of the Common Core State Standards in Mathematics (CCSSM) and carefully sequences the mathematical progressions into expertly crafted instructional modules. The companion Study Guides to Eureka Math gather the key components of the curriculum for each grade into a single location,

unpacking the standards in detail so that both users and non-users of Eureka Math can benefit equally from the content presented. Each of the Eureka Math Curriculum Study Guides includes narratives that provide educators with an overview of what students should be learning throughout the year, information on alignment to the instructional shifts and the standards, design of curricular

components, approaches to differentiated instruction, and descriptions of mathematical models. The Study Guides can serve as either a self-study professional development resource or as the basis for a deep group study of the standards for a particular grade. For teachers who are new to the classroom or the standards, the Study Guides introduce them not only to Eureka Math but also to the

content of the grade level in a way they will find manageable and useful. Teachers familiar with the Eureka Math curriculum will also find this resource valuable as it allows for a meaningful study of the grade level content in a way that highlights the coherence between modules and topics. Medicine, anatomy, astronomy, mathematics and cosmology, science began with the Greeks, and Plato, Aristotle, Pythagoras, Archimedes and Hippocrates were amongst its stars. That man ever managed to develop a "scientific" attitude to the natural world at all is one of the true wonders of human thought. Eureka! shows how, free from intellectual and religious dogma, these early thinkers rejected myths and capricious gods and, in distinguishing between the natural and supernatural, effectively discovered nature. Andrew Gregory, Professor of History and Philosophy of Science at University College London unravels the genesis of science in this fascinating exploration of the origins of Western civilisation, and our desire for a rational, legitimating system of the world.
