Irregular news releases from the National Highway Traffic Safety Administration.

Ford Escort & Mercury Tracer Automotive Repair Manual Haynes Publishing

The complete history of Mazda 's rotary engine-powered vehicles, from Cosmo 110S to RX-8. Charting the challenges, sporting triumphs, and critical reactions to a new wave of sports sedans, wagons, sports cars ... and trucks!

The Japanese automotive industry enjoyed spectacular success in the 1980s. This was largely due to the so-called 'Lean Production System' - the combination of an efficient production system, an effective supplier system, and a product development system. In the 1990s the industry fell on hard times because of the Japanese asset price bubble and extreme currency appreciation. In this book, eminent industry specialist Koichi Shimokawa draws on his thirty years of research and fieldwork with Japanese and American firms, to show how the Japanese automotive industry has managed to recover from this difficult period. He shows how firms like Toyota were able to transfer Japanese systems to overseas plants and how they have changed in order to

Examines Japan's innovative, highly successful production methods

Traditionally in International Relations, power and authority were considered to rest with states. But recently, in the light of changes associated with globalisation, this has come under scrutiny both empirically and theoretically. This book analyses the continuing but changing role of states in the international arena, and their relationships with a wide range of non-state actors, which possess

Today, the Multinational Enterprise (MNE) is seen as a leading agent in the process of globalization. As they adopt global strategies, MNE's are seen to be creating stronger, deeper and more lasting links amongst countries, thus shifting the balance of power inexorably in their favour, to the detriment of the state. This book interrogates this idea by undertaking a historical analysis of the global strategies of Ford.

*Autoworkers find themselves in a rapidly changing world as transnational corporations seek new forms of work organization and new boundaries for a North American auto industry. Inside the factory, management pursues new models of "lean production" that require workers to produce more with less—less time, less support, less material—in an atmosphere of accelerated and intensified labor. Outside the factory, "freetrade" policies and regional investment strategies widen the reach of transnational corporations, creating new opportunities in Mexico, Canada, and the U.S. for pitting worker against worker in a mutually destructive competition for jobs. In *Confronting Change*, researchers from a diverse range of universities and unions explore the impact of these changes on work and workers. The case studies and analyses show the wide range of potential outcomes as workers struggle to become actors, rather than victims, in the emerging North American auto industry.*
