

Groundie

Loaded with information and illustrations on standard and advanced climbing techniques, tools of the trade, rigging, throwline installation as well as a complete section on knots and hitches. For beginners or professional arborists.

"This interdisciplinary essay collection explores how the rhetoric of social justice can become a reality in the United States by interrogating matters of inclusion, diversity, equity, and access in a variety of contexts ranging from the Black Lives Matter movement and children's literature to the contemporary workplace and university"--

This book gives a comprehensive overview of all relevant elements in topography and their practical application. It elaborates on the classical representation of terrain on maps such as cartographic projections, together with their classification, scale, and geographical elements. It is richly illustrated with photographs, maps and figures. In which the theoretical explanations are clarified. Readers will become acquainted with the physical characteristics of the ground. I.e. tectonic and erosive shapes, the importance and classification of terrain, genetic (fluvial, abra) terrain (valleys, fields). In addition, the book discusses cartometry and coordinate systems, orientation in space (geographic, topographic, tactical) including by means of maps, instruments and the night sky and elaborates new techniques and technologies such as aerial photogrammetric imagery, global navigation satellite systems and LIDAR. The book also includes methods for the practical execution of concrete measurement operations, such as determining position and movement on land with maps, compass and azimuth which makes it especially useful for nature walks etc. As such it offers a valuable guide not only for undergraduate students but also for researchers in the fields of geography, geosciences, geodesy, ecology, forestry and related areas looking for an overview on topography. Uniquely, the book also features an extensive glossary of topographical terms.

They could find a bright future . . . or the end of everything Millions of Leaving Dream pilgrims have boarded ships, and are speeding towards the Void at the centre of the galaxy. They are chasing their dream – and expect to find paradise. Yet breaching the Void will trigger its expansion, destroying everything in its path. Paula Myo is desperate to find Void's latest prophet – Second Dreamer Araminta. As without her, the ships can't enter the Void. But when Araminta finally chooses her path, it will change things in ways no one could have imagined. And within it, the pilgrims – and the galaxy beyond? Following The Dreaming Void and The Temporary Void, The Evolutionary Void is an epic space opera and the conclusion to Peter F. Hamilton's Void trilogy, set in the world of the Commonwealth Saga.

With its soaring azure sky and stark landscapes, the American Southwest is one of the most hauntingly beautiful regions on earth. Yet staggering population growth, combined with the intensifying effects of climate change, is driving the oasis-based society close to the brink of a Dust-Bowl-scale catastrophe. In A Great Aridness, William deBuys paints a compelling picture of what the Southwest might look like when the heat turns up and the water runs out. This semi-arid land, vulnerable to water shortages, rising temperatures, wildfires, and a host of other environmental catastrophes, is in the midst of a starkly altered future. In this inspiring book, deBuys tells the inspiring stories of the climatologists and others who are helping untangle the complex, interlocking causes and effects of global warming. And while the fate of this region may seem at first blush to be of merely local interest, what happens in the Southwest, deBuys suggests, will provide a window into the future of the entire planet and the Middle East – will experience in the coming years. Written with an elegance that recalls the prose of John McPhee and Wallace Stegner, A Great Aridness offers an unflinching look at the dramatic effects of climate change occurring right now in our own backyard.

Discusses rules, terminology, equipment, and technique, and provides tips and illustrations

Our most compelling resource just might be the ground beneath our feet. When a teaspoon of soil contains millions of species, and when we pave over the earth on a daily basis, what does that mean for our future? What is the risk to our food supply, the planet's wildlife, the soil on which every life-form depends? How much undeveloped, untrodden ground do we even have left? Paul Bogard set out to answer these questions in The Ground Beneath Us, and what he discovered is astounding. From New York (where more than 118,000,000 tons of human development rest on top of Manhattan Island) to Mexico City (which sinks inches each year into the Aztec ruins beneath it), Bogard shows us the weight of our cities' footprints. And as we see hollowed ground coughing up bullets at a Civil War battlefield; long-hidden remains emerging from below the sites of concentration camps; the dangerous, alluring power of fracking; the fragility of the giant redwoods; our planet's oldest living things; the surprises hidden under a Major League ballpark's grass; and the sublime beauty of our few remaining wildest places, one truth becomes blazingly clear: The ground is the easiest resource to forget, and the last we should. Bogard's The Ground Beneath Us is deeply transporting reading that introduces farmers, geologists, ecologists, cartographers, and others in a quest to understand the importance of something too many of us take for granted: dirt. From growth and life to death and loss, and from the subsurface technologies that run our cities to the dwindling number of idyllic Edens that remain, this is the fascinating story of the ground beneath our feet.

A reference to designing and developing electrical systems connected to renewable energies Electrical Safety Engineering of Renewable Energy Systems is an authoritative text that offers an in-depth exploration to the safety challenges of renewable systems. The authors—noted experts on the topic—cover a wide-range of renewable systems including photovoltaic, wind, and cogeneration and propose a safety-by-design approach. The book clearly illustrates safe behavior in complex real-world renewable energy systems using practical approaches. The book contains a review of the foundational electrical engineering topics and highlights how safety engineering links to the renewable energies. Designed as an accessible resource, the text discusses the most relevant and current topics supported by rigorous analytical, theoretical and numerical analyses. The authors also provide guidelines for readers interested in practical applications. This important book: • Reviews of the major electrical engineering topics • Shows how safety engineering links to the renewable energies • Discusses the most relevant current topics in the field • Provides solid theoretical and numerical explanations Written for students and professional electrical engineers, Electrical Safety Engineering of Renewable Energy Systems explores the safety challenges of renewable systems and proposes a safety-by-design approach, which is currently missing in current literature.

These are case studies of student teams using VMT to work on problems in the mathematical domain of combinatorics. The version of VMT used here included a generic whiteboard for sketching graphical representations. Data from these sessions was analyzed by a number of researchers in addition to the VMT project members.The essays in this volume were co-authored with close colleagues.

In Jump Off the Hormone Swing, Lorraine Pintus shares openly about the inner tension a woman can feel at certain times of the month before wanting to love her neighbor on one hand, and wanting to strangle her and shoot her ugly dog on the other. While many books discuss the physical and emotional symptoms of hormones, this is the first to explore in depth the spiritual aspects. Jump! is a mentoring book, not a medical book. The focus is on attitude, not anatomy. Lorraine shares insights from her own journey as well as wisdom from 1,500 women she surveyed. Sound biblical wisdom is laced with humor because after all, when it comes to hormones, you either have to laugh or cry, and laughing is better! Get answers to these questions: · What is the number one thing I can do to feel better physically? · How does PMS and perimenopause affect me spiritually? · Which foods ease PMS symptoms...which make them worse? · How do hormones affect my brain? · Why does stress make my PMS worse and what can I do about it? · Are there benefits to PMS and perimenopause? (you'll discover 10!) · How can God possibly love me when I hate myself? Includes a 10-week study for individual and group use.

Slap and Tristan anticipate the dull calm of routine cargo runs, but their plans are thwarted by goons from a corrupt government, a mobster out for Tristan's blood, a mad engineer, a spoiled brat, and ghosts from Tristan's past.

REDD+ must be transformational. REDD+ requires broad institutional and governance reforms, such as tenure, decentralisation, and corruption control. These reforms will enable departures from business as usual, and involve communities and forest users in making and implementing policies that a] ect them. Policies must go beyond forestry. REDD+ strategies must include policies outside the forestry sector narrowly de] ned, such as agriculture and energy, and better coordinate across sectors to deal with non-forest drivers of deforestation and degradation. Performance-based payments are key, yet limited. Payments based on performance directly incentivise and compensate forest owners and users. But schemes such as payments for environmental services (PES) depend on conditions, such as secure tenure, solid carbon data and transparent governance, that are often lacking and take time to change. This constraint reinforces the need for broad institutional and policy reforms. We must learn from the past. Many approaches to REDD+ now being considered are similar to previous e] orts to conserve and better manage forests, often with limited success. Taking on board lessons learned from past experience will improve the prospects of REDD+ e] ectiveness. National circumstances and uncertainty must be factored in. Di] erent country contexts will create a variety of REDD+ models with di] erent institutional and policy mixes. Uncertainties about the shape of the future global REDD+ system, national readiness and political consensus require [] exibility and a phased approach to REDD+ implementation.

To Fell a Tree was written for the professional tree cutter as well as the weekend woodcutter. It's loaded with practical information that is essential to the safety and success of any tree felling and woodcutting operation, whether it's in the forest or the backyard. With step-by-step methods and more than 200 illustrations, topics include preparations before the work begins, felling a tree using a three-step procedure, felling difficult trees, and limbing and bucking the tree.--COV

This is the first book to focus on the use of nonlinear analysis and synthesis techniques for aircraft control. It is also the first book to address in detail closed-loop control problems for aircraft "on-ground" – i.e. speed and directional control of aircraft before take-off and after touch down. The book will be of interest to engineers, researchers, and students in control engineering, and especially aircraft control.

Tennis Magic joyfully demolishes the old myth that tennis is “too hard to learn” by de-mystifying every aspect of learning and playing the game. Smart, challenging and funny, it's loaded with tricks that are sure to supercharge your game and your enjoyment of the sport. The book presents a comprehensive study of important topics in Mechanics of pure and applied sciences. It provides knowledge of scalar and vector in optimum depth to make the students understand the concepts of Mechanics in simple, coherent and lucid manner and grasp its principles & theory. It caters to the requirements of students of B.Sc. Pass and Honours courses. Students of engineering disciplines and the ones aspiring for competitive exams such as AIME and others also find it useful for their preparations.

There are number of books on Vector Dynamics in the market for the use of degree students in various universities in India. It is the experience of author that the average students need the treatment of theory in a way that should be easily comprehensive to him. Therefore an effort has been made in this book to put the matter in a very lucid and simple way to that even a beginner has no difficulty in grasping the subject. Each chapter for this book contains complete theory and number of solved examples sufficient problems have also been selected from various university examinations paper. At the end of each chapter an exercise containing objective questions only has been given. The answer to almost all unsolved problems have been checked and every care has been taken to avoid printing and other mistakes. It is sincerely hoped that this book will satisfy the needs of the students and if it gives them even part of pleasure that the author had in its preparations he will consider his labour amply rewarded. The author will feel amply rewarded if the book serve the purpose for which it is means suggested for the importance of this book are always welcome. I am very thankful to the publisher, for their valuable effort to complete this book. Contents: Vectors, Reference Frames: Newtons Laws of Motion Galilean Invariance, Non Relative Particle Dynamics, Conservation Laws Laws of Conservation of Energy, Conservation of Laws of Conservation of Angular Momentum. (Continued).

Human Rights Law provides thorough coverage of human rights issues, offering a practical text for trainee solicitors and practitioners in Ireland. This fourth edition has been fully updated to cover recent developments in the field.

Webb brings his insider's knowledge, experience, and star power to the ultimate guide for aspiring songwriters. With a combination of anecdotes, meditation, and advice, he breaks down the creative process from beginning to end--from coping with writer's block, to song construction, chords, and even self-promotion. Webb also gives readers a glimpse into the professional music world.

Here, John Webster presents a trinitarian theology of holiness, which is aimed at a wide range of audiences, including ordinands, students of theology and interested laypeople. According to this account, God's holiness is known not in his simple transcendence but in his gracious and free relationship to his creatures. That holiness finds an echo in the holiness of the Christian community, especially in worship and witness, and in the life of the individual disciple. Integrating biblical, dogmatic and practical theology, the book – which is based on the Day-Higginbotham lectures delivered in the University of Toronto in 2002 – offers a succinct account of a central theme in Christian teaching and practice.

"The Dictionary of Classical Hebrew is a completely new and innovative dictionary. Unlike previous dictionaries, which have been dictionaries of biblical Hebrew, it is the first dictionary of the classical Hebrew language to cover not only the biblical texts but also Ben Sira, the Dead Sea Scrolls and the Hebrew inscriptions.This Dictionary covers the period from the earliest times to 200 CE. It lists and analyses every occurrence of each Hebrew word that occurs in texts of that period, with an English translation of every Hebrew word and phrase cited. Among its special features are: a list of the non-biblical texts cited (especially the Dead Sea Scrolls), a word frequency index for each letter of the alphabet, a substantial bibliography (from Volume 2 onward) and an English-Hebrew index in each volume." -- Publisher description.

The Front Office Manual is unique, providing clear and direct explanations of tools and techniques relevant to front office work. From how to build a yield curve, to how a swap works, to what exactly 'product control' is supposed to do, this book is essential reading for anyone who works (or wants to work) on the 'sell side'.

My fingers close around the trigger. I pause for a split second to think about the bullets I am about to spray across the ground. After today, I'll no longer be the new girl.' Captain Charlotte Madison is blonde, beautiful and flies Apache helicopters for a living. She has completed two tours of duty in Afghanistan and is currently fighting on the frontline in her third. DRESSED TO KILL shows us what life is like for

a girl in a resolutely male-dominated environment. But she isn't just a woman in a man's world, she's a woman women aspire to be – glamorous as well as brave, and beating the men at their own game. Only a tiny percentage of people can multi-task to the extreme level the aircraft demands, and most airmen who try to qualify as an Apache pilot fail. Full of the exciting, adrenaline-filled action that has made other

speak to a whole generation of young women who will relate to 27-year-old Charlotte in a way they never imagined possible.

Putting Thoughts into Words

This is a training manual for the beginning ground worker in the tree care industry. This book walks the reader--step-by-step--through a typical day of the arborticultural ground worker. From the shop to the job site, all the skills necessary to becoming a successful ground worker are presented in detail.

More than ever in this completely updated edition, The Elements of Expression helps word users "light up the cosmos or the written page or the face across the table" as they seek the radiance of expressiveness--the vivid expression of thoughts, feelings, and observations. Nothing kills radiance like the murky, generic language dominating today's talk, airwaves, and posts. It tugs at our every sentence, but using it to express anything beyond the ordinary is like flapping the tongue to escape gravity. The Elements of Expression offers an adventurous and inspiring flight into words that truly share what's percolating in our minds. Here writers, presenters, students, bloggers—even well intentioned "Mad Men"—will discover language to convey precise feelings, move audiences, delight and persuade. No snob or scold, the acclaimed word-maven Arthur Plotnik explores the full range of expressiveness, from playful "tough talk" to finely wrought literature, with hundreds of rousing examples. Confessing that we are all "like a squid in its ink" when first groping for luminous expression, he shines his amiable wit on the elements leading, ultimately, to language of "fissionable intensity."

Situating the global poverty divide as an outgrowth of European imperialism, this book investigates current global divisions on environmental policy.

"A truly amazing portrayal of the technical, the emotional, and the courageous. Macy puts the reader in the cockpit of our most lethal attack platform." —Dick Couch, New York Times–bestselling author Apache is the incredible true story of Ed Macy, a decorated Apache helicopter pilot, that takes you inside one of the world’s most dangerous war machines. A firsthand account of the exhilaration and ferocity of war, Apache chronicles a rescue mission involving a stranded soldier in Afghanistan in 2007. Ed Macy had always dreamed of a career in the army, so when the British Army Air Corps launched its attack helicopter program, Macy bent every rule in the book to make sure he was the first to sign up to fly the Apache—the deadliest, most technically advanced helicopter in the world and the toughest to fly. In 2007, Macy’s Apache squadron was dispatched to Afghanistan’s notorious Helmand Province with the mission to fight alongside and protect the men on the ground by any means necessary. When a marine goes missing in action, Macy and his team know they are the Army’s only hope of bringing him back alive. Apache is Macy’s story—an adrenalin-fueled account of one of the most daring actions of modern wartime, and a tale of courage, danger, and comradeship you won’t be able to put down. “A fantastic, totally exhilarating roller-coaster read.” —Sgt.
