You could think of Setting Up LAMP as four books in one, but it's actually something much more valuable: a single volume that presents the open-source technologies known collectively as LAMP—Linux, Apache, MySQL, and PHP—as tightly dovetailed components of today's most affordable and effective platform for building dynamic web-based applications. Each technology has uses outside of this context, of course, but within it they form something greater than the sum of their parts. This book shows you how to take full advantage of this power, walking you through all the steps required to lay your Linux foundation, install and configure your Apache web server, and then begin using PHP to access content stored in MySQL. Here are a few of the specific topics you'll find covered inside: Installing and configuring qmail with support for IMAP, POP3, SMTP, virtual domains, spam filtering, and antivirus Managing system users and groups Configuring your network Creating a custom firewall script using IP tables Recognizing when a system is in distress Handling MySQL database replication Configuring virtual domains Writing a basic PHP script that integrates with MySQL If you're new to all of this, you'll quickly get to where you need to be to start developing and deploying the higher-level pieces of your web application. Even if you have experience with one or all of these technologies, this book—including its quick-start installation appendix—is a resource you'll want close by whenever you're setting up or fine-tuning your LAMP system.

Clinical Applications of PCR offers an unprecedented collection of core PCR techniques for the study and diagnosis of human diseases. Cutting-edge and essential for today's diagnostic laboratories, these techniques heavily utilize nonisotopic, solution phase, and in situ amplification methods. A significant number of chapters describe applications exploiting the exquisite sensitivity of PCR in the detection of rare or single cells, as in identifying fetal cells circulating in maternal blood, preimplantation embryo diagnosis, or detecting circulating cancer cells. The methods described in Clinical Applications of PCR will well serve diverse clinical specialties ranging from hematology/oncology, human genetics, and microbiology, to virology, pathology, and infectious diseases. The book repeatedly demonstrates the power of PCR-its high sensitivity, specificity, and ability to rapidly discriminate sequence variations.

"At the time when I saw two suns in the sky, I received a warning about two waves that would bring destruction to this place where I have left this warning." In the year AD 1054, a wise man from the Chaco Society scratched an ominous warning in rock art. More than a thousand years later, twenty-six-year-old tribal archaeologist Jon Two-Bears and professor Pamela Parker team up on a dig in the west end of the Grand Canyon. To their surprise, they uncover what appears to be an ancient warning. It predicts there will be a huge landslide in the narrows of Lake Mead that will send a freshwater tsunami downstream eighteen miles-wiping out the Hoover Dam. The inland tsunami will continue south, destroying everything in its path to the Gulf of California. Due to the seismic activity that is taking place in the Lake Mead area, it's obvious that this ancient prophecy is about to become a reality.

Jon and Pamela make a valiant effort to convince people to flee to higher ground before the killer waves wipe out large areas of the southwestern United States. Will the warnings be heeded? Or will millions become victims of the tsunami twins?
