

Strategy To Save The Planet

The effects of global warming are being felt around the world through climate change, and images of our rivers and oceans choking with plastic have provoked an instinctive horrified reaction. In response, governments, corporations and individuals are beginning to change their policies and behaviour but is it too little, too late? Is it possible to reverse the damage we have done to the planet, or have we reached the point where we are only able to manage the problems and devastation caused? This engaging and incisive volume offers insightful analysis of a

range of key issues including deforestation, global warming and single use plastics, while evaluating whether and how it may just be possible to mend our planet.

American democratic capitalism is in danger. How can we save it? For its first two hundred years, the American economy exhibited truly impressive performance. The combination of democratically elected governments and a capitalist system worked, with ever-increasing levels of efficiency spurred by division of labor, international trade, and scientific management of companies. By the nation's bicentennial celebration in 1976, the American economy was the envy of the world. But since then,

outcomes have changed dramatically. Growth in the economic prosperity of the average American family has slowed to a crawl, while the wealth of the richest Americans has skyrocketed. This imbalance threatens the American democratic capitalist system and our way of life. In this bracing yet constructive book, world-renowned business thinker Roger Martin starkly outlines the fundamental problem: We have treated the economy as a machine, pursuing ever-greater efficiency as an inherent good. But efficiency has become too much of a good thing. Our obsession with it has inadvertently shifted the shape of our economy, from a large middle class

and smaller numbers of rich and poor (think of a bell-shaped curve) to a greater share of benefits accruing to a thin tail of already-rich Americans (a Pareto distribution). With lucid analysis and engaging anecdotes, Martin argues that we must stop treating the economy as a perfectible machine and shift toward viewing it as a complex adaptive system in which we seek a fundamental balance of efficiency with resilience. To achieve this, we need to keep in mind the whole while working on the component parts; pursue improvement, not perfection; and relentlessly tweak instead of attempting to find permanent solutions. Filled with keen economic

insight and advice for citizens, executives, policy makers, and educators, When More Is Not Better is the must-read guide for saving democratic capitalism.

Saving Planet Earth starts right here, right now' Stella McCartney From the bestselling author of Eating Animals, a brilliantly fresh and accessible take on climate change - and what we can do about it 'Climate change is the greatest crisis humankind has ever faced. It is that straightforward, that fraught. Where were you when you made your decision?' In this extraordinarily powerful and deeply personal book, Jonathan Safran Foer lays bare the battle to save the planet. Calling each one of us to action, he answers the most urgent question of all: what will it take for things to change? It all starts with what we eat for breakfast. Are you just playing—or playing to win? Strategy is not complex. But it is hard. It's hard because it forces people and organizations to make

Online Library Strategy To Save The Planet

specific choices about their future—something that doesn't happen in most companies. Now two of today's best-known business thinkers get to the heart of strategy—explaining what it's for, how to think about it, why you need it, and how to get it done. And they use one of the most successful corporate turnarounds of the past century, which they achieved together, to prove their point. A.G. Lafley, former CEO of Procter & Gamble, in close partnership with strategic adviser Roger Martin, doubled P&G's sales, quadrupled its profits, and increased its market value by more than \$100 billion in just ten years. Now, drawn from their years of

experience at P&G and the Rotman School of Management, where Martin is dean, this book shows how leaders in organizations of all sizes can guide everyday actions with larger strategic goals built around the clear, essential elements that determine business success—where to play and how to win. The result is a playbook for winning. Lafley and Martin have created a set of five essential strategic choices that, when addressed in an integrated way, will move you ahead of your competitors. They are:

- *What is our winning aspiration?*
- *Where will we play?*
- *How will we win?*
- *What capabilities must we have in place to win?*
- *What management systems are required to*

support our choices? The stories of how P&G repeatedly won by applying this method to iconic brands such as Olay, Bounty, Gillette, Swiffer, and Febreze clearly illustrate how deciding on a strategic approach—and then making the right choices to support it—makes the difference between just playing the game and actually winning. The book outlines the evidence that global warming is caused by the direct heating effect of the sun's rays on the planet and provides a step-by-step program on what we must do to arrest this. The G20 nations should join forces to attain the cooperation of all nations to initiate the program as soon as possible to stop the global

warming advance and make this a priority strategy. Desertification, partly due to global warming, is progressing at an alarming rate. Climate change: watershed or endgame? In this compelling new book, Noam Chomsky, the world's leading public intellectual, and Robert Pollin, a renowned progressive economist, map out the catastrophic consequences of unchecked climate change—and present a realistic blueprint for change: the Green New Deal. Together, Chomsky and Pollin show how the forecasts for a hotter planet strain the imagination: vast stretches of the Earth will become uninhabitable, plagued by extreme weather, drought, rising seas, and

crop failure. Arguing against the misplaced fear of economic disaster and unemployment arising from the transition to a green economy, they show how this bogus concern encourages climate denialism.

Humanity must stop burning fossil fuels within the next thirty years and do so in a way that improves living standards and opportunities for working people. This is the goal of the Green New Deal and, as the authors make clear, it is entirely feasible.

Climate change is an emergency that cannot be ignored. This book shows how it can be overcome both politically and economically.

Investing responsibly is one of the most powerful ways that you can fight climate change. No longer a niche sector for rebel fund managers, conscious investing has the potential to raise huge sums of money to the companies and organisations on the front line fighting the climate crisis and make investors positive returns in the process. In this essential introduction to green investing, Alice Ross shows you how you can turn your savings and pensions, however big or small, into a force for change. You will learn: - Which sectors are leading the charge by developing

cutting-edge solutions; from smart farming to renewable energy - How to cut through 'alphabet soup' jargon and identify 'greenwashing' - The ways you can maximise your economic power and hold those you're investing in to account

'Changing the way that we invest is one of the most powerful levers we have for solving climate change. This hugely interesting and immensely practical book not only explains why changing how we invest is so critically important but also provides a set of powerful tools for actually doing it'

For years, Derrick Jensen has asked his audiences, "Do you think this culture will undergo a voluntary transformation to a sane and sustainable way of life?" No one ever says yes. Deep Green Resistance starts where the environmental movement leaves off: industrial civilization is incompatible with life. Technology can't fix it, and shopping—no matter

how green—won't stop it. To save this planet, we need a serious resistance movement that can bring down the industrial economy. Deep Green Resistance evaluates strategic options for resistance, from nonviolence to guerrilla warfare, and the conditions required for those options to be successful. It provides an exploration of organizational structures, recruitment, security, and target selection for both aboveground and underground action. Deep Green Resistance also discusses a culture of resistance and the crucial support role that it can play. Deep Green Resistance is a plan of action for anyone determined to fight for this planet—and win.

By 1979, we knew all that we know
now about the science of climate
change – what was happening, why
it was happening, and how to stop
it. Over the next ten years, we had

the very real opportunity to stop it. Obviously, we failed. Nathaniel Rich's groundbreaking account of that failure – and how tantalizingly close we came to signing binding treaties that would have saved us all before the fossil fuels industry and politicians committed to anti-scientific denialism – is already a journalistic blockbuster, a full issue of the New York Times Magazine that has earned favorable comparisons to Rachel Carson's *Silent Spring* and John Hersey's *Hiroshima*. Rich has become an instant, in-demand expert and speaker. A major movie deal is already in place. It is the story, perhaps, that can shift the

conversation. In the book *Losing Earth*, Rich is able to provide more of the context for what did – and didn't – happen in the 1980s and, more important, is able to carry the story fully into the present day and wrestle with what those past failures mean for us at the beginning of the twenty-first century. It is not just an agonizing revelation of historical missed opportunities, but a clear-eyed and eloquent assessment of how we got to now, and what we can and must do before it's truly too late. The planet is under serious threat from industrial civilisation, yet until now environmentalists have not considered strategies that might

actually prevent the looming biotic collapse the Earth is facing. Earth at Risk is a vital and timely discussion of the world's environmental issues, featuring thinkers and activists who are willing to ask the hardest questions about the seriousness of the current global crisis. Each contributor in the volume presents an impassioned critique of the dominant culture and aims to change the way people think about saving our planet.

Business and environmental sustainability are not natural bedfellows. Business is about making money; sustainability is about protecting the planet. Business is measured in months and quarters; sustainability often requires significant short term costs

to secure a sometimes uncertain long-term benefit. To some activists, all executives are exploitative, selfish “1 percenters”. To some executives, all activists are irresponsible, unyielding extremists. And yet engaging with the issue isn’t optional – all businesses must have a strategy to deal with sustainability and, like any strategy, this involves making choices. Strategy and Sustainability encourages its readers to filter out the noise and make those choices in a hard-nosed and clear-eyed way. Rosenberg’s nuanced and fact-based point of view recognizes the complexity of the issues at hand and the strategic choices businesses

Now that Trump has turned the United States into a global climate outcast, will China take the lead in saving our planet from environmental catastrophe? Many signs point to yes. China, the world's largest carbon emitter, is

Online Library Strategy To Save The Planet

leading a global clean energy revolution, phasing out coal consumption and leading the development of a global system of green finance. But as leading China environmental expert Barbara Finamore explains, it is anything but easy. The fundamental economic and political challenges that China faces in addressing its domestic environmental crisis threaten to derail its low-carbon energy transition. Yet there is reason for hope. China's leaders understand that transforming the world's second largest economy from one dependent on highly polluting heavy industry to one focused on

clean energy, services and innovation is essential, not only to the future of the planet, but to China's own prosperity.

When the 44th President of the United States is elected, he will face urgent crises on three major fronts: the American economy, the wars in Iraq and Afghanistan, and the growing threat to the world environment caused by climate change. This short, powerful book shows the way forward: a clear action plan for the new President's first 100 days, that if implemented will set America on course for dynamic job creation and economic growth, reduce our conflicted dependence on foreign oil, and

produce energy that is green, affordable, and renewable. Backed by sound science and based on the best ideas of America's experts, The 100 Day Action Plan to Save the Planet outlines practical steps that include: *Launch a "clean energy surge" and create a powerful new workforce of green manufacturing, supply, technology, management, and support jobs. *End carbon subsidies that make fossil fuels much cheaper than their actual cost. *Create a market by requiring all federal buildings, facilities, and transportation to be fueled by renewable green energy. *Reward innovation and early adoption of renewable energy in the private

sector. * Work constructively with other nations for global solutions to the climate crisis. It's not too late; climate change can be dramatically reversed. Green energy is the key to America's economic strength and independence—but the nation needs the president to act boldly and decisively, just as Franklin Delano Roosevelt did in his first 100 days in office, during a time of similar urgency.

Rick Fedrizzi is the most important environmentalist you've never heard of--and Greenthink is his manifesto. A former Fortune 50 manufacturing executive, Fedrizzi became a leader of the modern environmental movement when he played an instrumental role in creating the most

Online Library Strategy To Save The Planet

important and far-reaching sustainability movement of our time: the green building movement. Today, Fedrizzi's work and ideas are transforming the real estate industry, one of the largest sectors of the global economy, and one of the largest contributors to climate change. As a co-founder of the U.S. Green Building Council, Fedrizzi oversaw the creation of LEED--Leadership in

Online Library Strategy To Save The Planet

Energy & Environmental Design--which has certified more than four billion square feet of sustainable real estate worldwide. According to Paul Hawken, a legendary environmentalist, "USGBC may have had a greater impact than any other single organization in the world on materials saved, toxins eliminated, greenhouse gases avoided, and human health enhanced." But that's only half the story: the green building industry has

Online Library Strategy To Save The Planet

also sparked billions of dollars of economic impact and created millions of jobs. This stunning revelation--that sustainability is profitable--is at the heart of Fedrizzi's call to action in Greenthink. For decades, environmentalists and the private sector have been at odds. Activists have decried the impact of industry on the environment. Business leaders, meanwhile, resent environmentalists

for "job-killing regulations." But in Greenthink, Fedrizzi turns conventional wisdom on its head by showing how profit can save the planet, and how sustainability is the biggest business opportunity of the 21st century. With the urgency of Al Gore's An Inconvenient Truth, the illuminating stories of Tom Friedman's The Lexus and the Olive Tree, and the insight of Malcolm Gladwell's The Tipping Point, Fedrizzi calls

Online Library Strategy To Save The Planet

the reader's attention to hidden yet fundamental truths about our environment, our society, and our economy. His message is as controversial as it is clear: leverage the profit motive to save the world--and its humans--from environmental catastrophe. With a heartfelt foreword by actor and activist Leonardo DiCaprio, Greenthink is a must-read for anyone who cares about the future

of our environment, or the future of our economy. Because, in Fedrizzi's words, "they will share the same fate."

The science of climate change leaves no doubt that policies to cut emissions are overdue. Yet, after twenty years of international talks and treaties, the world is now in gridlock about how best to do this. David Victor argues that such gridlock has arisen because international talks have drifted away

from the reality of what countries are willing and able to implement at home. Most of the lessons that policy makers have drawn from the history of other international environmental problems won't actually work on the problem of global warming. Victor argues that a radical rethinking of global warming policy is required and shows how to make international law on global warming more effective. This

Cities across the globe are growing fast. Today many are environmental nightmares with polluted air, excessive energy consumption and an absence of nature. But big cities don't have to mean a dystopian future. They can be turned around to be powerhouses of well-being and environmental stability – if we empower women. This book is a unique collaboration between C40 and Friends of the Earth showcasing pioneering voices in the environmental and feminist movements. This book reveals just

how women's empowerment is critical to environmental sustainability. This book is a rallying call for the planet, for women, for everyone.

In 1980, the International Union for Conservation of Nature and Natural Resources, the United Nations Environment Programme and the World Wide Fund for Nature, the world's three most powerful organizations dedicated to preventing environmental catastrophe, published the World Conservation Strategy. It stressed the interdependence of conservation and development, it gave currency to the idea of sustainable development and it made the point that unless the

vitality and productivity of the planet are safeguarded, the future for humanity is at risk. Its impact was immediate and worldwide.

This dissertation is about the problems of global population and women's fertility as constructed, circulated and contested among a network of American environmental actors. The first decade of the new millennium witnessed an upsurge in environmentalist attention to population trends, particularly in the context of widespread attention to climate change. Using ethnographic research conducted among a network of U.S. foreign aid donors, environmental, population and family planning NGO managers, and college youth activists, this

Online Library Strategy To Save The Planet

dissertation asks the questions: What- and who- is driving the renewed focus on population growth as a driver of ecological crisis? What strategies are being used to drive a linked population-environment development agenda forward, and what effects do these strategies have on population science, policy, and political debates? I argue that, rather than reprise familiar neo-Malthusian arguments, these actors draw on scientific knowledge and social justice frameworks, to position population-environment advocacy in the realm of progressive politics. At the same time, population advocates increasingly enroll young activists as the newest cadre of

international population advocates, through contradictory and contentious approaches to framings of race, gender and justice politics. This multi-sited project is highly interdisciplinary, drawing on conceptual approaches from the fields of political ecology, science and technology studies and medical anthropology to interrogate questions the uses of scientific knowledge production, political messaging, and racialized and gendered body politics in international population-environment advocacy. In chapter 2, I explore the historical processes of articulation which have come together and fractured apart at particular historical conjunctural

moments. It focuses on how the population problem' and its potential solutions have been constructed scientifically and politically over time, crystallizing in the 20th century as hegemonic paradigms within international development. Chapter 3 centers on the micropractices through which college youth are trained in population-environment messaging and other advocacy strategies, focused on the strategic use of social justice discourses, technology-based advocacy, and selective use of ecological and climate science data. In this chapter, I argue that these practices are constitutive of the process of making development

actors from afar. Chapter 4 analyzes the changing role of racial politics in population-environment advocacy over time, charting the ways race has moved from a zone of heated controversy to providing an opening for new representational strategies. In chapter 5, I explore the behind the scenes role of private donors whose creative financing of population projects manifests over time as a powerful form of advocacy. Chapter 6 focuses on recent developments in scientific knowledge linking population growth with climate change, arguing that the projections these data represent are productive of both novel forms of thinking about

the future, as well as anticipatory interventions that help shape it. The conclusion explores the possible futures of population-environment advocacy, raising questions about the transformative potential of transnational youth organizing predicated on a radical rupture from the past.

renowned biologist Edward O. Wilson states that in order to stave off the mass extinction of species, including our own, we must move swiftly to preserve the biodiversity of our planet. In this "visionary blueprint for saving the planet" (Stephen Greenblatt), Half-Earth argues that the situation facing us is too large to be solved piecemeal and proposes a solution commensurate with the magnitude of the

problem: dedicate fully half the surface of the Earth to nature.

Identifying actual regions of the planet that can still be reclaimed—such as the California redwood forest, the Amazon River basin, and grasslands of the Serengeti, among others—Wilson puts aside the prevailing pessimism of our times and "speaks with a humane eloquence which calls to us all" (Oliver Sacks).
