At the invitation of the Deutsche

March 2000, dealing with future

possibilities for biomonitoring in
occupational and environmental medicine.

Biomonitoring has reached a high
standard in Germany over the past 30

This book combines the expertise gathered from various areas within toxicology, occupational medicine,

immunology and human genetics, right up to analysis and epidemiology. Throughout,

the focus is on comprehensively

determining the diagnostic validity of

cytogenetic parameters as well as

biochemical and biological effect markers

for the prevention of illnesses resulting

(UNFCCC) was opened for signature. The UNFCCC was subsequently signed and ratified by 174 countries, making it one of the most accepted international treaties ever. The second period was initiated at the 3 Conference of the Parties (COP3) to the UNFCCC in Kyoto in 1997, which produced the Kyoto Protocol (KP). Till

now, eighty-four countries have signed the Kyoto Protocol, but only twelve ratified it.

A major reason for this slow ratification is that most operational details of the Kyoto

Protocol were not decided in Kyoto but deferred to following conferences. This

deferral of the details, while probably appropriate to initially reach an

agreement, is a major stepping stone for a speedy ratification of the protocol.

National policy makers and their constituencies, who would ultimately bear the cost of Kyoto, are generally not prepared to ratify a treaty that could mean anything, from an unsustainable strict regime of international control of
